

Restaurant Simulator GDD

Overview

The game is a restaurant simulator/tycoon game where the player builds a restaurant empire from a single store to an industry-dominating franchise. The player starts as the sole employee, handling all responsibilities before transitioning into management by hiring staff, expanding locations, and dealing with competition.

Core Gameplay Mechanics

Player Responsibilities

- Cooking and preparing food
- Taking customer orders and serving food
- Cleaning and maintaining the restaurant
- Purchasing ingredients and managing inventory
- Handling finances (pricing menu items, paying rent, taxes, wages, and supply costs)

Employee Management

- Employees have skill levels that determine their efficiency in different roles.
- Employees can be promoted and trained to improve skills.
- Employees have happiness/efficiency levels, which are affected by relationships, work conditions, and salary.
- Some employees may quit if mistreated or if conflicts arise.
- Exceptional employees can gain popularity and attempt to start their own competing restaurants.

Customer AI

- Customers have preferences based on region and demographics.
- Bad service, long wait times, or low-quality food affects revenue and reputation.
- Some customers may attempt theft or vandalism.

Progression System

Expansion & Franchise Management

- Players can rent/purchase store locations based on local demand.
- Different cities have unique regulations, tax rates, and business environments.
- Players can hire store managers to automate operations at each location.
- Franchise-wide policies can be set globally, per region, or per store.
- Restaurants can upgrade appliances, automate certain tasks, and improve decor.

Dynamic Economy

- Market fluctuations affect ingredient prices.
- Currency values change based on international trade and events.
- Regional conflicts or political events can influence business regulations and competition.

Multiplayer & Sabotage

- Players can compete or collaborate in an open-ended multiplayer mode.
- Options include:
 - Running independent restaurant chains
 - Being hired by another player's restaurant as an employee or manager
 - Engaging in corporate sabotage (stealing packages, bribing officials for tax hikes on rivals, hiring vandals, etc.)

World & Economy Simulation

Procedural World Generation

- The world is a finite, procedurally generated Earth-like map with cities, towns, and villages.
- Cities have different levels of population density, crime rates, and economic strength.
- Regions have varying tax laws and business regulations.
- Countries have states or provinces, each with unique policies.

Player Needs & Travel

- The player must eat and sleep.
- Options for sleeping include:
 - Renting or purchasing a home in different regions
 - Staying at hotels for temporary lodging
- Players can travel between stores using:
 - Public transportation (early game)
 - Personal cars (mid-game)
 - Private jets (late-game, skipping commercial flight wait times)

Endgame & Player Freedom

- No single "win" condition; success is defined by the player.
- Goals include:
 - Building a global restaurant monopoly
 - Dominating competitors through legal or illegal means
 - Playing casually, experimenting with different strategies
- Additional gameplay elements:
 - Casino or similar distractions to break up business-focused gameplay
 - Various side activities and interactions to enrich the world
